Agenda

- Introducing Containers
- Containerizing Apps and Data Centers
- Running SQL Server in Containers
- The Container Universe
- Hands on with Containers
- Container Orchestration
- High Availability Container Scenarios
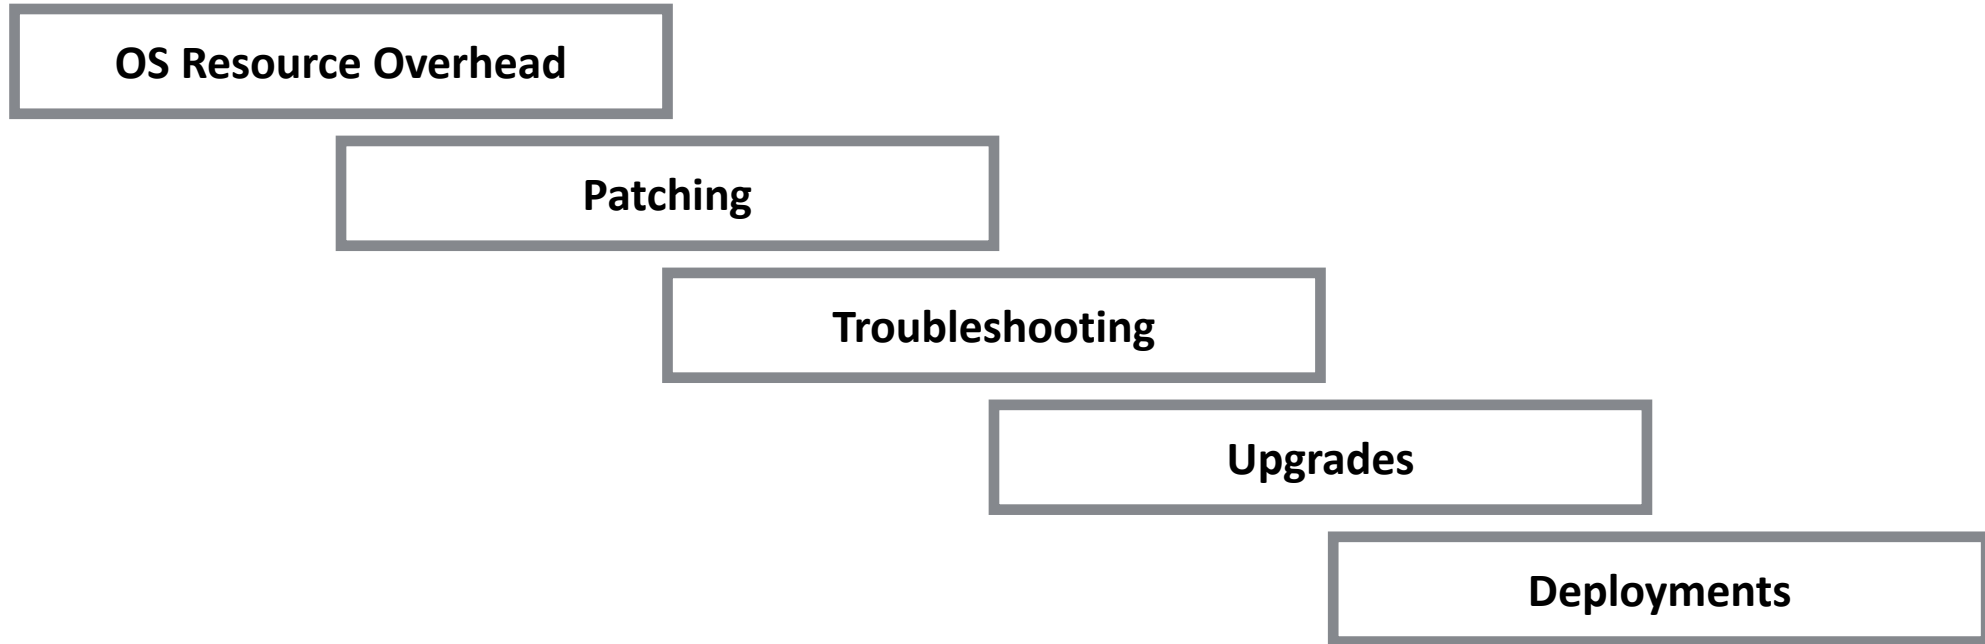

Centino
systems

Introducing Containers

- Operating system virtualization
  - Shared kernel and system resources
- Container…contain…
  - Binaries, libraries and file system
- One app inside the container
  - This is the unit of work
- Containers are ephemeral
- Let's start off with a comparison…

| App1 |
| --- |
| Binaries/Libraries |
| Container |

Virtual Machines

App1	App2	App3	App4	App5	App6

Guest OS	Guest OS	Guest OS

Hypervisor

Physical Machine

High Maintenance

Centino systems

What's so Hard About Virtual Machines?

OS Resource Overhead

Patching

Troubleshooting

Upgrades

Deployments

Does any of this move your business forward?

Centino
systems

Containers

App1	App2	App3
Binaries/Libraries	Binaries/Libraries	Binaries/Libraries
Container	Container	Container

Host Operating System

Physical Machine

Lower Maintenance

Centino systems

It's all about goin' fast!

Centino
systems

What do Containers Bring to the Table?

Fast and Consistent Deployments

Upgrades

Troubleshooting
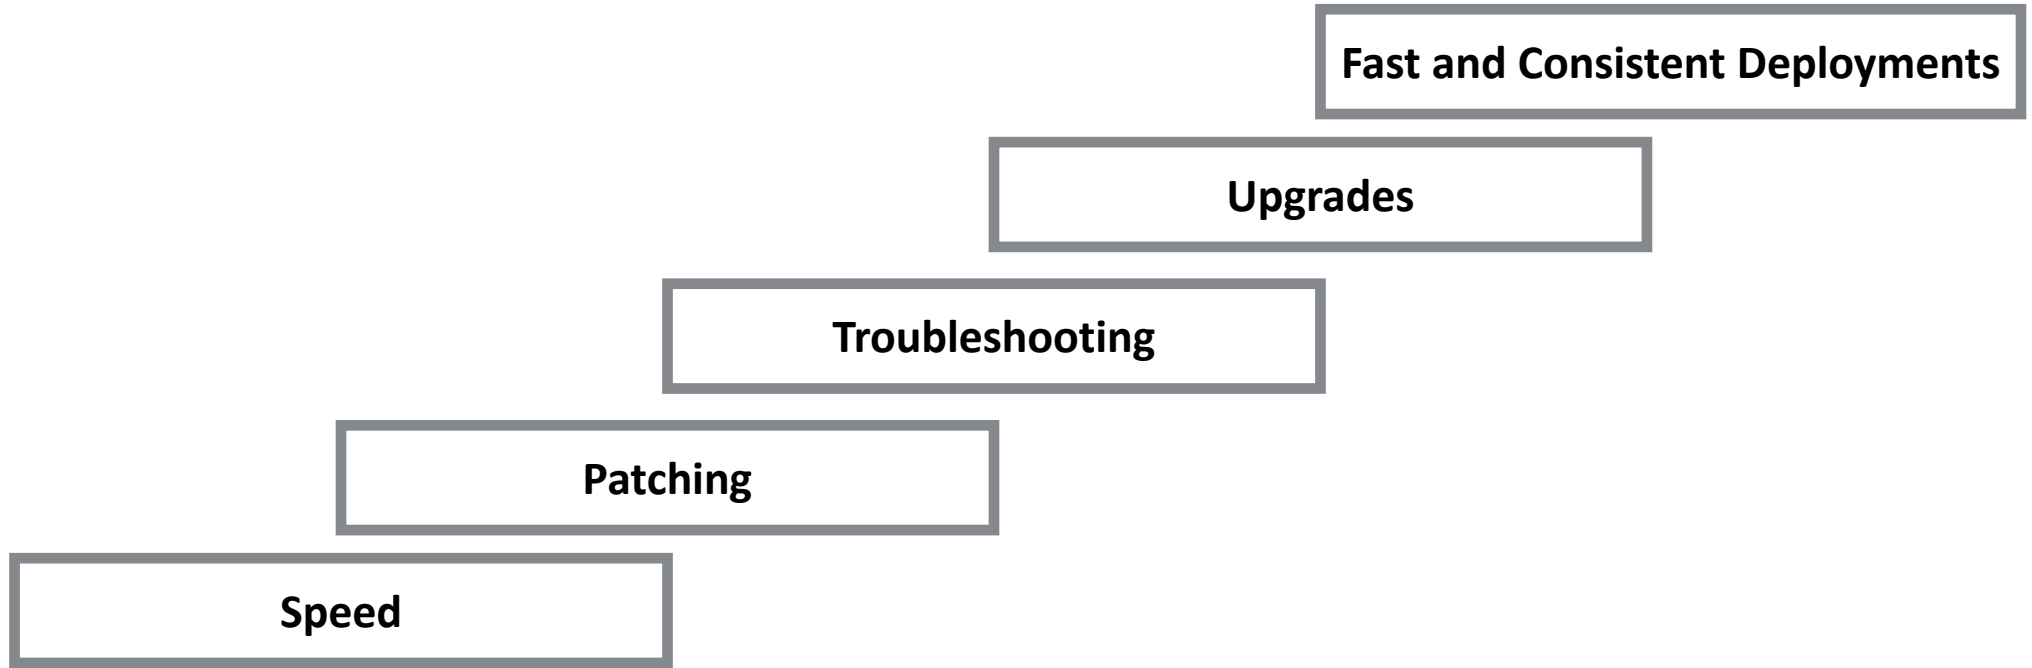

Patching

Speed

Services, we care about getting work done!

Centino
systems

Containers

Patching/Deployments/Whatever

App1	App2	App3
Binaries/Libraries	Binaries/Libraries	Binaries/Libraries
Container	Container	Container

Host Operating System

Physical Machine

Centino systems
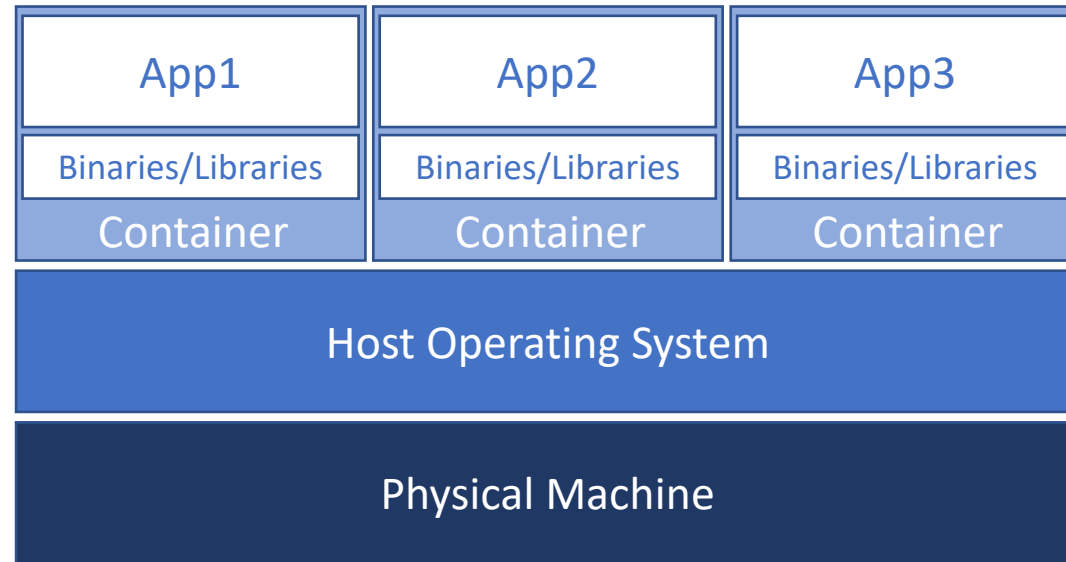

Containerizing Apps and Data Centers

- Reducing development time
- Deployment automation – speed and consistency
- Enables DevOps and CI/CD scenarios
- Orchestration
- High availability
- Rethink how you deploy - it's the application service, not the server

Centino
systems

The Container Universe

- Docker
  - Linux
  - Windows
  - Mac
- Docker Inc.
- Other Container Engines
  - rkt
 - CoreOS
  - Windows
  - chroot…chwhat?
Getting Containers

- **Images** – code, runtimes, libraries, environment variables
- **Registries** – where images live. Docker Hub, Azure Container Registry, internal
- **Docker Files** – defines the container image

Docker File				App1
App1				Binaries/Libraries
Binaries/Libraries				Container
Image	Push it!	Registry	Pull it!	Host Operating System
Build!				Physical Machine

Container Internals

- Shared OS
- Resource isolation
  - Namespaces
    - **Process Isolation** - PID
    - **File System** – MNT
    - **Network** – NET
    - **Interprocess Communication** - IPC
    - **Kernel Isolation** - UTS
- Resource governing
  - cgroups
- Union file system

App1	App2	App3
Binaries/Libraries	Binaries/Libraries	Binaries/Libraries
Container	Container	Container

Host Operating System

Physical Machine

Centino
systems

Data Persistency in Containers

- But containers are ephemeral, what about my data?

Centino
systems

Data Persistency in Containers

- If your container is alive so is your data, don't delete the container
- Docker Data Volumes
  - Docker managed resource
  - Independent of the container
- https://docs.docker.com/storage/

App1	App2	App3
Binaries/Libraries	Binaries/Libraries	Binaries/Libraries
Container	Container	Container

Host Operating System

vol1 | Physical Machine

Running SQL Server on Containers

- Why run SQL Server on a Container?

- Same reasons…

    - Deployments, upgrades, patching, speed…agility
    - What if the unit of persistency IS the database…NOT the Server!

- Windows and Linux is available

    - https://github.com/Microsoft/mssql-docker

- Non-production on Windows

- Production on Linux, but no Windows auth…but that's OK, right?

Centino systems

Demo!

- Pull an Image

- Run a Container

- Access our application

- Connect to the Container

- Persisting data with a Container

Centino systems

Container Orchestration

- Workload placement
- Managing state, starting things up and keeping things up
- Load balancing services
- Networking
- Persistent storage
- Declarative model

Container Orchestrators

- Docker Swarm
- Kubernetes
- Red Hat OpenShift
- Azure Kubernetes Services (AKS)
- Google Kubernetes Engine (GKE)
- Amazon Elastic Container Service for Kubernetes (EKS)

Container Orchestration - Services
Container Orchestration – High Availability

What's Next?

- Production?
- Are containers perfect…no!
- Drop some Tweets on the Twitters about this session ;)
